Dear Hiring Manager,

I am excited to apply for the Software Engineering position. After graduating from the University of Washington in 2022 with a BA in Sociology and transitioning into software engineering, I have developed a passion for building data-driven, user-centered products. My unique blend of a sociology background and technical training allows me to approach development with a focus on inclusivity and collaboration.

My passion lies in creating projects for people. We are not mindless machines but we build tools to empower people and make their lives better. I have experience developing full-stack applications from my bootcamp at General Assembly. Additionally, I earned a certificate from the University of Washington that strengthened my understanding of algorithms, data structures, and software testing—all essential skills for creating scalable, secure applications.

I hope to be a team player and develop with a team mindset. I'm committed to helping my teammates get unstuck, while also focusing on my own tasks to ensure progression for our project. It's not just about my work but everyone's progress together.

I would love the opportunity to contribute to your team and create impactful software. Thank you for considering my application, and I look forward to hearing from you.

Sincerely,
Jihun Edward Park
